Forest Laboratories, Inc. v. Ivax Pharmaceuticals, Inc.

C.A.Fed. (Del.),2007.

United States Court of Appeals, Federal Circuit. FOREST LABORATORIES, INC., Forest Laboratories Holding, Ltd., and H. Lundbeck a/s, Plaintiffs-Appellees,

IVAX PHARMACEUTICALS, INC. and Cipla, Ltd., Defendants-Appellants. No. 2007-1059.

> Sept. 5, 2007. Rehearing Denied Oct. 12, 2007.

Background: Patentee and assignee brought action against manufacturer of generic drugs and its intended supplier alleging infringement of its patent for antidepressant drug, and manufacturer filed counterclaims of invalidity and unenforceability. The United States District Court for the District of Delaware, Judge Joseph J. Farnan, Jr., J. 438 FSupp.2d 479, upheld patent's validity and enjoined manufacturer and supplier from infringing it. Manufacturer and supplier appealed.

Holdings: The Court of Appeals, Lourie, Circuit Judge, held that:

- finding that prior art reference in printed publication did not anticipate patent was not clearly erroneous;
- (2) finding that patent was not invalid for obviousness was not clear error;
- (3) finding that claim in reissue patent did not improperly broaden scope of claims was not clear error; and
- (4) supplier was subject to injunction.

Affirmed as modified.

<u>Schall</u>, Circuit Judge, dissented in part and filed opinion.

Before LOURIE, Circuit Judge, FRIEDMAN, Senior Circuit Judge, and SCHALL, Circuit Judge.

Opinion for the court filed by Circuit Judge LOURIE. Opinion concurring as to parts I through IV.A and dissenting as to part IV.B filed by Circuit Judge SCHALL LOURIE, Circuit Judge.

Ivax Pharmaceuticals, Inc. ("Ivax") and Cipla, Ltd. ("Ciplar") appeal from the order of the United States District Court for the District of Delaware entering judgment upholding the validity of United States Resisue Pattern 34,712 ("the 172 pattern") in favor of Forest Laboratories, Inc., Forest Laboratories Holding, Ltd., and H. Lundbeck AVS (collectively "Forest") and enjoining Ivax and Cipla from infringing the 71,20 pattern. We affirm the district

court's entry of judgment on validity and its entry of an injunction as to both Ivax and Cipla, but we modify the injunction to apply only to escitalopram ovalate.

#### BACKGROUND

Ivax filed Abbreviated New Drug Application 76-765 ("the ANDA") at the Food and Drug Administration, pursuant to 21 U.S.C. § 355(j) (§ 505(j) of the Federal Food, Drug, and Cosmetic Act), for approval to market generic tablets containing 5, 10, or 20 milligrams of escitalopram oxalate ("EO"). The ANDA certified, pursuant to 21 U.S.C. § 355(j)(2)(A)(vii)(IV), that the claims of the 712 patent are invalid and/or not infringed by the manufacture, use, or sale of the products for which approval was sought. Cipla is the intended supplier of EO for Ivax and contributed information for the filing of the ANDA. Forest filed suit on September 22, 2003, alleging that Ivax's filing of the ANDA infringed the 712 patent under 35 U.S.C. § 271(e)(2)(A). FNI Ivax filed its answer on October 15, 2003, denying infringement and counterclaiming for invalidity of the 712 patent. Forest later amended its complaint to add Cipla as a defendant on May 27, 2004.

FN1. 35 U.S.C. 8. 271(e)(2)(A) provides: It shall be an act of infringement to submit an application under section 505(j) of the Federal Food, Drug, and Cosmetic Act or described in section 505(b)(2) of such Act for a drug claimed in a patent or the use of which is claimed in a patent if the purpose of such submission is to obtain approval under such Act to engage in the commercial manufacture, use, or sale of a drug or veterinary biological product claimed in a patent or the use of which is claimed in a patent before the expiration of such patent.

The 112 patent issued on August 30, 1994 and relates, Inter all in, to a substantially pure (+)-enantiomer of citalopram (also referred to as "escitalopram") and nontoxic acid additional salts thereof. Stereoisomers are compounds that contain the same constituent atoms and the same bonding between those atoms but have different spatial arrangements. Enantiomers are stereoisomers that are nonsuperimposable mirror images of one another. Enantiomers accordingly exhibit different optical activity: the enantiomer that rotates a plane of

polarized light in the clockwise direction is the (+)enantiomer; the enantiomer that rotates a plane of polarized light in the counterclockwise direction is Enantiomers may also be the (-)-enantiomer. designated as the S-enantiomer and the R-enantiomer according to a different criterion relating to the location of the chiral centers. In the case of citalopram, the (+)-enantiomer is also the Senantiomer. A mixture of equal amounts of two enantiomers is \*1266 called a racemic mixture or a racemate, and separating the two enantiomers from a racemate is referred to as resolving the compound. Forest also owned the now expired U.S. Patent 4,136,193 on the racemic form of citalopram and U.S. Patent 4,650,884 that claims a method for making racemic citalopram using an intermediate racemic 1.4-diol.

EO, which is the oxalate salt form of escitalopram, is one of the compounds encompased by the claims of the 712 patent. It is an antidepressant by virtue of being a selective serrotonir reuptake inhibitor and is the active ingredient in Forest's Lexapro® branded drug. Forest has alleged that Ivax and Cipin infringed claims 1, 3, 5, 7, 9 and 11 of the 712 patent by filing the ANDA. Independent claim 1 of the 712 patent reads as follows:

A compound selected from substantially pure (+)-1-(3-Dimethylaminopropyl)-1-(4-fluorophenyl)-1,3-dihydroisobenzofuran-5-carbonitrile and non-toxic acid addition salts thereof.

712 patent col.10 Il.31-34. Dependent claim 11 recites a method of preparing the compound of claim 1 by cyclizing an intermediate diol.

The parties stipulated to a specific claim construction for the primary disputed term in the 712 patent, and, based on that agreement, the parties further stipulated that the proposed products included in the ANDA infringe claims 1,3,5,7, and 90 the 712 patent and that the proposed process for making those products infringes claim 11. Thus, the district court was only required to reach a determination with respect to the counterclaims, including those asserting that the claims are invalid for anticipation and obviousness, and that they were improperly broadened through reissue.

After a bench trial, the district court issued its decision on July 13, 2006, concluding that I vax and Cipla had failed to prove that the 712\_patent is invalid as anticipated. Specifically, the court found that an article by Donald F. Smith ("Smith") entitled The Stereoseteritity of Serotonin Uptake in Brain

Tissue and Blood Platelets: The Topography of the Serotonin Untake Area ("Smith reference") did not anticipate claim 1 of the 712 patent because it did not disclose "substantially pure" escitalopram as claimed in claim 1 and it did not enable a person having ordinary skill in the art to obtain that compound. The court found that chiral High Performance Liquid Chromatography ("HPLC") was a relatively new and unpredictable technique at the time of the invention and that Smith had worked with the founder of the field of chiral HPLC to senarate the enantiomers of citalopram near the time of the invention, but had failed in his efforts. The court also found that a team of chemists at Lundbeck had unsuccessfully attempted to use chiral HPLC to resolve citalopram for two years and that Dr. Danishefsky, Forest's medicinal chemistry expert, had unsuccessfully tried to resolve compounds with HPLC in the mid-1980's. The court also found that an inventor of the 712 patent, Dr. Bogeso, had conducted numerous experiments attempting to resolve racemic citalopram through the method of diasteriomeric salt formation, but had also failed. Finally, the court found that Dr. Bogeso only attempted to resolve citalopram using a diol intermediate, as recited in claim 11 of the patent, as a last resort and that others of skill in the art would have similarly hesitated because there was a real possibility that the resolved intermediate would re-racemize during the attempt to convert it from the diol intermediate enantiomer to the desired citalogram enantiomer. Thus, the court found that attempting to separate the enantiomers of citalogram based on the knowledge of one of ordinary skill in \*1267 the art would have required undue experimentation and that the Smith reference was therefore not enabled.

Next, the district court concluded that Ivax and Cipla had failed to prove by clear and convincing evidence that any of the asserted claims of the 712 patent were obvious. The court found that one of ordinary skill in the art at the time of the invention would generally have been motivated to develop new compounds rather than undertake the difficult and unpredictable task of resolving a known racemate. The court further found that a person of ordinary skill attempting to resolve racemic citalogram would have had no reasonable expectation of success for reasons similar to those discussed with respect to enablement of the Smith reference. With respect to the method of claim 11 of the 712 patent, the court found that none of the articles relied upon by Ivax and Cipla described the particular types of reactions claimed (viz.. "a Mosher ester serving as a leaving group for a

ring closure of a Diol Intermediate, "sun enanticoonserving ring closure of a diol containing a tertiary amine to form a tetrahydrofuran," or "an enanticoonserving cyclization reaction of the type needed to convert a tertiary amine like any enantiomerically pure Diol Intermediate into substantially pure (+)-eitalopram"). The court also found that secondary considerations of commercial success, unexpected results, and copying by others supported the validity of the claims.

In addition, the district court found that claim 11 of the 712 patent was not invalid for impermissible During the reissue broadening during reissue. proceeding that resulted in the 712 patent, claim 11 was corrected to claim a method of converting a(-)diol intermediate to (+)-citalopram, rather than using a(+)-diol intermediate as shown in the original patent claim. The court found that, given the specific description of the process in the specification, this change amounted to correction of a typographical error. In other words, the court found that the mistake would have been clear to one of ordinary skill in the art reviewing the patent, and therefore that it did not constitute a change in scope from the original claim.

The court entered judgment in accordance with its opinion on November 3, 2006 and at the same time enjoined both Ivax and Cipla "from commercially making, using, offering to sell or selling within the United States, or importing into the United States any products that infringe the 712 patent, including the escitalopram oxalate products referred to in the Abbreviated New Drug Application No. 76-765 until such time as the 712 patent gyriers." Ivax and Cipla timely appealed. We have jurisdiction pursuant to 28 U.S.C. 8. 1295(a)(1).

#### DISCUSSION

#### 1. Anticipation

On appeal, Ivax and Cipla argue that the Smith reference clearly anticipates claim 1 of the 212 patent because it discusses and analyzes the efficacy of various drug enantiomers and predicts that one citalogram enantiomer will be more potent as a serotonin reuptake inhibitor than the other. Ivax and Cipla further argue that one of ordinary skill in the art would have known at the time of the invention to use disasteriomeric saft formation to resolve citalogram. Specifically, a person of skill in the art would have

used the method described in the Wilen reference to resolve the meemic intermediate diol into its enantiomers and the method in the Jacobus reference (Williamson ether symthesis) to convert the diol enantiomer (by cyclizing the ether ring) to (+)citalopram. Ivax and Cipla add that Dr. Bogesot's ability to resolve citalopram on his first try after \*1268 starting with the diol intermediate is further compelling evidence that only routine experimentation was required to separate the enantiomers.

In response, Forest argues that the Smith reference does not disclose "substantially pure" (+)-citalopram. Forest also argues that the testimony of the experts and the repeated failures of Dr. Bogeso and others to resolve citalogram into its enantiomers support the district court's determination that the Smith reference was not enabled for (+)-citalogram. Forest also states that the court was correct to conclude that a person of ordinary skill would have viewed the difficulty in resolving the diol intermediate rather than citalopram itself as significant and a deterrent. In addition, Forest argues that even if a person of skill in the art were to consider using the diol, the Wilen and Jacobus references do not involve compounds with structures similar enough to the citalopram diol intermediate so that a person of ordinary skill would rely upon them to predict the results of a reaction with that compound. specifically, Forest argues that neither reference discloses a cyclizing reaction involving a compound, like the citalogram diol, that has a resident tertiary amine or a benzylic alcohol.

[I][2] Anticipation is a question of fact that we review for clear error following a bench trial. Ameer Inc. v. Hoceks Marcina Rossel, Inc., 457 F.3d 1293, 1304 [Fed.Cir.2006]. "Under the clear error standard, the court's findings will not be overturned in the absence of a definite and firm conviction that a mistake has been made." Impea. Lobs., Inc. v. Avenits Pharm. Inc., 468 F.3d 1366, 1375. [Fed.Cir.2006] (quotation omitted). "Whether a prior art reference is enabling is a question of law based upon underlying factual findings." Id. at 1382 (quoting Minn. Mining & Mig. Co. v. Chemque, Inc., 303 F.3d 1294, 1301 [Fed. Cir.2002].

[3] We agree with Forest that the district courts factual findings relating to enablement of the Smith reference are not clearly erroneous, and, based upon those findings, we find no error in the district courts conclusion that the Smith reference is not enabled with respect to (+)-citalopram. The Smith reference

is a pharmacology paper, not a chemical paper. It describes the effects of various enantiomers of particular drugs (not including (+)-citalopram) on the uptake of serotonin in brain tissue and/or platelets. It mentions racemic citalopram ("also of interest") and shows its structure, but predicts, incorrectly, that the R-enantiomer (the (-)-enantiomer for citalogram, not the one claimed in the 712 patent) should be far more potent as a serotonin reuptake inhibitor. Because a racemate does encompass its two enantiomers, it in effect does state that there is a(+)enantiomer of citalogram, but it does not tell how to obtain it. A reference that is not enabling is not anticipating. Elan Pharm., Inc. v. Mayo Found. For Med. Educ. & Research, 346 F.3d 1051, 1054 (Fed.Cir.2003). The Smith reference, as a pharmacology paper, thus does not enable the preparation of the (+)-enantiomer of citalogram.

Ivax and Cipla acknowledge that the Smith reference itself does not teach one of ordinary skill how to make (+)-citalopram, but their arguments that it is enabled by other references are largely a recounting of the testimony favorable to their theory of the case without explanation as to why we should have a definite and firm conviction that mistakes were made by the district court in its fact-finding. In other words, they do not inform us why the district court was not entitled to rely on the evidence favorable to Forest or demonstrate that the evidence favorable to them heavily outweighed the evidence favorable to Such evidence includes the failures of various scientists to resolve \*1269 citalopram as recited above. Given Ivax and Cipla's failure to disturb the detailed and thorough factual findings underlying the district court's decision, we see no error in the finding that the Smith reference does not enable one of ordinary skill to make (+)-citalopram and hence that the Smith reference does not anticipate claims to (+)-citalopram.

### II. Obviousness

I wax and Cipla argue that (+)-citaloprum was obvious in light of racemic citaloprum and descriptions of techniques available to separate enantiomers from their racemates. Further, they argue that the general expectation in the art that one enantiomer would be more potent than the other provided reason for a person of ordinary skill in the art to isolate the enantiomers. For reasons similar to those discussed with respect to their argument that the Smith reference was enabled, I wax and Cipla contend that a person of ordinary skill in the art would have had a

reasonable expectation that one could separate the enantiomers of citalopram. Ivax and Cipla also argue that [Exappros® commercial success was due to aggressive marketing rather than any alleged superiority of the drug to alternatives and that it did not possess unexpectedly superior properties. I was and Cipla also argue that claims 3, 5, 7, and 9 represent only obvious variations on claim 1 with no elements that are not standard in medical chemistry and that claim 11 represents the obvious way of resolving citalopram in light of the teaching of the Willen and Jacobus references.

In response, Forest argues that any prima facie obviousness based on racemic citalogram was rebutted by the evidence demonstrating the difficulty of separating the enantiomers and the unexpected properties of (+)-citalopram. Forest argues that it was unexpected that all of the therapeutic benefit of citalopram would reside in the (+)enantiomer, resulting in escitalopram having twice the potency of racemic citalopram. Forest also argues that the district court was entitled to credit evidence that a person of ordinary skill in the art would not easily have turned to the diol intermediate to attempt resolution of racemic citalogram both because of the uncertainty involved and because Wilen and Jacobus describe compounds less complex than those necessary here to resolve the diol intermediate and then convert the (-)-diol enantiomer to escitalopram.

[4] "Obviousness is a question of law, reviewed de novo, based upon underlying factual questions which are reviewed for clear error following a bench trial." <u>Leapting Enter. Inc. v. Fisher-Price. Inc. 435 E.34</u> 1157. 1160 (Fed.Ciz.2007) (quoting <u>AlizeCorp. v.</u> <u>Mylan Labs. Inc.</u> 464 F.3d 1286. 1289 (Fed.Ciz.2005) (Fed.Ciz.2007).

[5] We agree with Forest that the district court's key factual findings underlying its conclusions on obviousness are not clearly erroneous, and, based upon those findings, we find no error in the court's conclusion that the asserted claims of the 712 patent are not invalid for obviousness. As with their arguments on anticipation, Ivax and Cipla mainly emphasize the evidence that is favorable to their desired outcome without addressing the evidence favorable to Forest. The latter includes the failure of the inventors and others to resolve citalogram without undue experimentation and the testimony of Forest's experts. The district court applied the Graham factors to conduct a thorough analysis of the evidence, and we find no clear error on facts and no error of law. See Graham v. John Deere Co., 383

U.S. 1, 86 S.Ct. 684, 15 L.Ed.2d 545 (1966). These findings fully support the conclusion that the claimed subject matter would not have been obvious to one of ordinary skill in the art.

### \*1270 111. Broadening Reissue

Ivax and Cipla argue that claim 11 of the 712 patent is invalid because it represents a broadening of original claim 11. They argue that the change in the optical rotation sign of the diol intermediate in claim 11 during reissue was clearly a broadening of the claim because the claim now covers a process beginning with a different enantiomer. Ivax and CipIa also argue that a typographical error may nonetheless be broadening and that a typographical error must be evident to the general public in order to serve the public notice function of patents. In response, Forest argues that the district court correctly determined that the reissue application corrected a typographical error that was readily apparent to one of ordinary skill in the art reviewing the patent and therefore did not result in any change in the scope of the patent.

## The reissue statute reads as follows:

Whenever any patent is, through error without any deceptive intention, deemed wholly or partly inoperative or invalid, by reason of ... the patentee claiming more or less than he had a right to claim in the patent, the Director shall ... reissue the patent for the invention disclosed in the original patent ... for the unexpired part of the term of the original patent... No reissued patent shall be granted enlarging the scope of the claims of the original patent unless applied for within two years from the grant of the original patent.

### 35 U.S.C. § 251.

[6] The 712 reissue patent resulted from an application filed more than two years after the grant of the original patent, and the claims of a reissue patent filed after that date are invalid if they enlarge the scope of the original claims. Se25\_U.S.C. § 282; Ountum Corp. v. Rodime P1C, 65 F.24 IST. 183. (Ted.Cir. 1995). However, a change in a result proaden the scope of the claims and so does not render the patent invalid. The question before us the whether the change effected in the reissue application here broadened the scope of claim 11 or merely estrified or corrected the original claim.

IZIISI Comparison of the scope of the reissue claims with the claims of the original patent is a matter of claim construction, and it is performed from the perspective of one having ordinary skill in the art. See Pannu v. Story Instruments, Inc. 238 F.3d 1366, 1370 (Fed.Cir.2001): Phillips v. APH Corp. 415 F.3d 1303, 1313 (Fed.Cir.2005) (on bane). Whether the claims of a reissue patent violate 35 LJS.C. § 251 is a question of law that we review de novo based on underlying facts reviewed for clear error. Medizonic, Inc. v. Guidant Corp., 465 F.3d 1360, 1373 (Fed.Cir.2005)

[9] We agree with Forest that the change in the optical rotation sign for the diol intermediate in claim 11 of the 712 patent did not broaden the scope of the The patent specification supports, even compels, this conclusion. In Reaction Scheme I, the process begins with a racemic mixture of the diol intermediate. See 712 patent col.5 Il.41-42. The diagram of Reaction Scheme I reinforces that conclusion because it includes a notation next to the diagram of the diol intermediate that reads "(+) and (-)," '712 patent (emphasis added). The patent then describes a reaction sequence that results in production of "the ester as a diastereomeric mixture." Id. at col.5 11.47-48. It is the diastereomeric mixture of an ester (of a monoalcohol) that is then subjected to HPLC to produce an enantiomerically pure compound that can be converted into the desired (+)citalogram end product. Id. at col.5 ll.47-59. Further, as found by the district court, because Reaction Scheme I begins with the racemate of the \*1271 diol intermediate, the patent is ambiguous as to which enantiomer of the diol intermediate is actually converted to (+)-citalopram.

In contrast, while the description of Reaction Scheme ll also begins with the racemate of the diol intermediate, it is the diol intermediate itself that is resolved to produce an enantiomerically pure product compound. Id. at col.6 ll.8-33. The description also specifically describes using the (-)-diol intermediate to produce (+)citalopram. Id. at col.6 11.29-42. Further support is again provided by the diagram of Reaction Scheme II, which includes a notation that reads "(-) or (+)" next to the structural diagram of citalopram. 712 patent (emphasis added). Thus, the enantiomeric labeling for the end product is reversed from that of the starting compound. Given this plain reading and the additional supporting expert testimony also relied upon by the district court, we see no error in the district court's finding that a person of ordinary skill in the art reviewing the patent would find the error in claim 11 relating to the optical sign of the diol intermediately apparent. The diagram of Reaction Scheme II makes clear that it is the (-)-diol that is converted to (+)-citalopram and that the correction in the claim corresponds to the disclosure in the specification. We therefore agree that the change in the optical sign during reissue does not represent a change of claim scope, but merely a correction of the claim to be consistent with the disclosure of the specification.

#### IV. The Scope of the Injunction

Ivax and Cipla argue that the language of the injunction is overly broad in extending to "any products that infringe the 712 patent." Also, they argue that the artificial act of infringement created by 35 U.S.C. § 271(e)(2)(A) is narrow and that Cipla's provision of information to Ivax for its filing of the ANDA is not an act of infringement. Ivax and Cipla further argue that the injunction granted by the district court violates our holding in International Rectifier Corp. v. IXYS Corp., 383 F.3d 1312, 1316 (Fed.Cir.2004). Forest responds that the injunction is sufficiently narrowly defined because of the infringement stipulation of the parties and the Forest also argues that because detailed record. Cipla will manufacture and import the EO products described in the ANDA if it is approved, Cipla may properly be enjoined for inducement of infringement.

## A. Scope of Products

[10] We do not agree with the scope of the district court's injunction that includes products other than escitalopram oxalate. "Although the standard of review for the issuance and scope of an injunction is abuse of discretion, whether the terms of the injunction fulfill the mandates of Federal Rule of Civil Procedure 65(d) is a question of law that this court reviews de novo." Signtech USA, Ltd. v. Vutek. Inc., 174 F.3d 1352, 1356 (Fed.Cir.1999). In International Rectifier, we held that "the only acts [an] injunction may prohibit are infringement of the patent by the adjudicated [products] and infringement by [products] not more than colorably different from the adjudicated [products]. 383 F.3d at 1316. In order to comply with Rule 65(d), the injunction should explicitly proscribe only those specific acts."

[11] Here, the 712 patent covers a range of products beyond those described in the ANDA. The statute, 35 U.S.C. § 271(e)(4)(B), provides that "injunctive relief may be granted against an infringer to prevent

the commercial manufacture, use, offer to sell, or sale within the United States or importation into the United States of importation into the United States of an approved drug." Thus, while the injunction may properly extend to the \*1272 \*approved drug." it should not extend to the remainder of the products covered by the patent. The injunction is therefore modified to delete the language "any products that infringe the 1/12 patent, including."

#### B. Inclusion of Cipla

However, we find that it was not inappropriate for the district court to include Cipla within the scope of the injunction. Section 271(e)(2) may support an action for induced infringement. Allergan, Inc. v. Alcon Labs., Inc., 324 F.3d 1322, 1331 (Fed.Cir.2003). "The only difference in the analysis of a traditional infringement claim and a claim of infringement under section 271(e)(2) is the timeframe under which the elements of infringement are considered." Id. An inquiry into induced infringement focuses on the party accused of inducement as the prime mover in the chain of events leading to infringement. Here, we do not know if Cipla first approached Ivax or vice versa, but the plan to manufacture, import, market, and sell the EO products described in the ANDA was undoubtedly a cooperative venture, and Cipla was to manufacture and sell infringing EO products to Ivax for resale in the United States. Under the standards for inducement which we apply to 35 U.S.C. § 271(b), Cipla has therefore actively induced the acts of Ivax that will constitute direct infringement upon approval of the ANDA, and it was thus not inappropriate for the district court to include Cipla within the scope of the injunction.

[12] The dissent asserts that § 271(e)(1) exempts Cipla from being enjoined with Ivax. We disagree. Cipla is providing information, and will provide material, that Ivax will use to obtain FDA approval. Up to that point, there is indeed no infringement. And, in fact, Ivax is not currently liable for infringement, as long as it is only pursuing FDA approval, not commercially manufacturing or selling the infringing product. However, just as Ivax will be liable for, and hence is being enjoined from, the commercial exploitation of escitalopram when it is approved by the FDA and during the life of the patent, so should Cipla be enjoined. They are Cipla would be contributing to the infringement by Ivax, so the injunction should cover both partners. It is true that, as the dissent states, § 271(e)(2) defines Ivax's filing of its ANDA as an

infringement, and Cipla did not file the ANDA; however, when the question of an injunction against commercial activity arises, Cipla is as culpable, and hence entitled to be enjoined, as Iwax.

#### CONCLUSION

For the reasons stated, we affirm the district court's grant of judgment of no invalidity of the 712 patent and the entry of injunction, as modified herein, as to both Ivax and Cipla pursuant to the stipulation of infringement.

#### AFFIRMED

SCHALL, Circuit Judge, dissenting-in-part. I join the court's opinion insoftar as it () affirms the judgment of non-invalidity of the 712 patent and (ii) modifies the scope of the injunction issued by the district court. However, I respectfully dissent from the court's opinion insofar as it affirms the district courts entry of an injunction as to Cipla.

Ivax filed its ANDA seeking approval to market generic tablets containing escitalopram oxalate. See \*1273Forest Labs. Inc. v. Ivax Pharms. Inc. 438 F.Supp.2d 479, 484 (D.Del.2006). Under the statutory framework set forth by Congress:

It shall be an act of infringement to submit-(A) an application under section 505() of the Federal Food, Drug, and Cosmetic Act or described in section 505(b)(2) of such Act for a drug claimed in a patent or the use of which is claimed in a patent, or

(B) an application under section 512 of such Act or under the Act of March 4, 1913 (21 U.S.C. 151-158) for a drug or veterinary biological product which is not primarily manufactured using recombinant DNA, recombinant RNA, hybridoma technology, or other processes involving site specific genetic manipulation techniques and which is claimed in a patent or the use of which is claimed in a patent.

if the purpose of such submission is to obtain approval under such Act to engage in the commercial manufacture, use, or sale of a drug or veterinary biological product claimed in a patent or the use of which is claimed in a patent before the expiration of such patent.

35 U.S.C. § 271(e)(2). By its terms, the statute limits the act of infringement to the filling of a ANDA application. At the same time, 35 U.S.C. § 271(e)(4)(B) provides that "injunctive relief may be granted against an infringer to prevent the commercial manufacture. use, offer to sell, or sale

within the United States or importation into the United States of an approved drug or veterinary biological product." (Emphasis added).

In interpreting a statute, we presume that Congress intended to give words their ordinary meaning. Asgrow Seed Co. v. Winterboers. 513 U.S., 179, 187, 115 S.C. 788, 130 L.Ed.2d 682 (1995). In § 271(e(2)). Congress schoes to employ the clause "[i]t shall be an act of infringement to submit." The plain anguage of § 271(e(2)) tous complet the conclusion that an action for infringement may lie based upon the filling of an ANDA. by filling its ANDA, Ivax committed an act constituting infringement under § 271(e(2)) and, as an infringer, was properly enjoined under § 271(e(4)/4B).

Cipla provided information to Ivax that was included in the ANDA, and if the ANDA were approved, Cipla would manufacture the <u>escitalopram oxalate</u> used in the proposed generic drugs. <u>Forest</u>, 438 <u>ESupp.2d at 434</u>. In contrast to what IVAX did in this case, Cipla's involvement-limited to providing information to IVAX that was included in the submission of the ANDA-seems akin to the activity protected by paragraph (e)(1) of the statute, which provides that:

It shall not be an act of infringement to make, use, offer to sell, or sell within the United States or import into the United States a patented invention ... solely for uses reasonably related to the development and submission of information under a Federal law which regulates the manufacture, use, or sale of drugs or veterinary biological products.

35 U.S.C. § 271(e/I). The Supreme Court has stated that "§ 271(e/I)" s exemption from infringement extends to all uses of patented inventions that are reasonably related to the development and submission of any information under the [Federal Food, Drug, and Cosmetic Act]." Merck KGa4 v. husepa Lifesciences, 1.1.d., 345. U.S. 193, 202. 125 S.Cl. 2372. 162 L.Ed.2d. 160 (2005). In short, Congress made it an act of infringement to file an ANDA, but exempted from infringement acts reasonably related to the development "1274 and filing of an ANDA, such as those of Cipla here.

In holding that it was not inappropriate for the district court to include Cipla within the scope of the injunction, the court relies on <u>Allergen</u>, <u>Inc.</u> v. <u>Alcon</u> <u>Labs</u>, <u>me</u>, 324 F.3d 1322 (Fed. Cir. 2003), for the proposition that § 271(e)(2) may support an action for induced infringement. Maj. op. at 1272. I think <u>Allergan</u> is distinguishable on its facts. In <u>Allergan</u>, we held as a general matter that § 271(e)(2) may support an action for induced infringement. Pull Nowever, in Allergam the defendant was the party that submitted the ANDA. 324 F.3d. at 1332 ("Slummary judgment of non-infringement under section. 271(e)(2) ] is inappropriate where the plaintiff can demonstrate the existence of a genuine issue of material fact with respect to the claim that the ANDA filler will induce infringement of its party of the ANDA. "(emphasis added)). In other words, the court was presented with the question of whether § 271(e)(2) may support an action where the ANDA filler would induce infringement if the ANDA filler would induce infringement if the ANDA of the vould induce infringement if the ANDA filler would induce infringement induce infringement in the ANDA filler would induce infringement in

FNI. In Allergan, a drug manufacturer, Allergan, who held a patent for a method of using a specified drug for a particular purpose brought an infringement action against two competitors, Alcon and Bausch & Lomb, who filed ANDAs seeking approval for the production of a generic version of the drug for a use different from the method of use of the drug claimed in the patent. Allergan brought its suit under 35 U.S.C. § 271(e)(2), alleging that if the FDA approved Alcon's and Bausch & Lomb's ANDAs, Alcon and Bausch & Lomb would induce doctors to infringe Allergan's patents by prescribing the drug for the patented method of use and would induce patients to infringe by using the drug for the patented method of use.

I am unable to agree that <u>Allerson</u> supports the proposition that, standing alone, what Clipla did here (providing information used in the filing of an ANDA) can form the basis for a cause of action under § <u>271(e)(2)</u>. In my view, that proposition goes beyond the language of § <u>271(e)(2)</u>. Accordingly, I respectfully dissent from that part of the court's opinion that affirms the district court's action enjoining Clipla.
